Line reactor, three-phase, aluminium LR3A 40-5/500 Discontinued line - not for new designs

Standards

Line- and commutation reactor to DIN EN 61558-2-20, IEC 61558-2-20, UL 506, CSA 22.2

Advantages

Use as line reactor, commutating reactor or PFC reactor

Weight reduction through aluminum winding

Ensuring the short-circuit voltage of 3, 4 or 5 % to the mains

Power harmonic damping

Starting current limitation

Increases the service life of consumers

Low ripple

Bridging voltage dips

Peak current limitation

Very good corrosion protection and low noise thanks to vacuum impregnation $% \left({{{\rm{D}}_{\rm{s}}}} \right)$

Integrated lifting rings

Applications

Line reactor to minimise mains pollution, to reduce the reactive-power components and charging currents in the DC link capacitor and to improve the cos(phi).
