Line reactor, three-phase, aluminium

LR3A 40-5/90 Discontinued line - not for new designs

Image shows LR3A 40-4/115

Advantages

- Use as line reactor, commutating reactor or PFC reactor
- Weight reduction through aluminum winding
- Ensuring the short-circuit voltage of 3, 4 or 5 % to the mains
- Power harmonic damping
- Starting current limitation
- Increases the service life of consumers
- Low ripple
- Bridging voltage dips
- Peak current limitation
- Very good corrosion protection and low noise thanks to vacuum impregnation
- Integrated lifting rings

Applications

Line reactor to minimise mains pollution, to reduce the reactive-power components and charging currents in the DC link capacitor and to improve the cos(phi).
